# Financial Institutions make significant investments into blockchain / DLT realizing the economic potential of the technology

Venture investment in blockchain – related companies  
2011-2016 \$mn

Source: KPMG / CB Insight, « The Pulse of Fintech ». Includes investments in bitcoin

Selected external highlight initiatives to develop DLT/Blockchain  
2016 - 2017

- **Nasdaq Linq:** Facilitating the issuance, cataloguing and recording of transfers of privately held companies (Partnership Nasdaq/Chain).
- **Citi-Nasdaq Partnership** on Blockchain payment system: A series of payment transactions have been made using Citi's automated processing of cross-border payments (WorldLink) via a link between the CitiConnect for Blockchain and Nasdaq Linq.
- **JP Morgan** developed and open-sourced Quorum, a permissioned version of the Ethereum DLT. Piloted DLT-powered equity swap post-trade using technology from Axoni.
- **BNY Mellon** working on DLT protocol for IoT. Developed a test system that works alongside existing transaction record system and uses DLT to create a backup record of brokerage transactions.
- **State Street** created blockchain prototype for OTC derivatives. Started collaboration with Irish funds.
- **Nordea** presented KYC pilot outcomes – executed in cooperation with other Nordic peer financial institutions – that aimed to improve customer experience and providing an efficient KYC process for the Nordic financial sector.
- **Credit Suisse** eyes 2018 launch for Blockchain loan platform.

Objectives: Lower cost of transaction, more security, improving compliance and privacy

# Key positive declaration for Cryptocurrencies development

---

**BNP PARIBAS**

The bank for a changing world

| CIB Blockchain Lab | 16

## ... But some doubts remain.

### Pros

*"So in many ways, virtual currencies might just give existing currencies and monetary policy a run for their money. The best response by central bankers is to continue running effective monetary policy, while being open to fresh ideas and new demands, as economies evolve."*

**Bank of England Conference, Sep 29<sup>th</sup> 2017**

Cad-Coin – Project Jasper: on-going collaboration between R3 and six private Canadian banks, Payments Canada and the Bank of Canada that began to explore the possibility of clearing & settling large value payments using distributed ledger technology. CAD-Coin=Central bank issued digital asset.

MAS partnered with R3, to launch Project Ubin for developing a proof-of-concept to conduct inter-bank payments through DLT.

### Cons

*"Bitcoin is a fraud."*

*"Bitcoin is a bubble."*

*"No member state can introduce its own currency; the currency of the euro is the euro."*

China banned Initial coin Offering and start-ups cannot use an ICO to raise money. It does not stop Chinese crypto – currency developers and service providers from getting in on action.

# Cryptocurrencies have surged in value in less than a year

Market Cap of all Coins.  
Bitcoin & Ethereum's percentage of total market cap

Comparison of Market Cap – September 2017

Sources:  
coinmarketcap.com /  
Bloomberg

But Market Cap remains extremely low vs major mature markets

- The number of cryptocurrencies worth >\$1mn soared in 2017
- While the total value of all currencies together skyrocketed
- Developers and enterprises have embraced the crypto-currencies (Ethereum) for the POC use-cases as Blockchain infrastructure and speculators note the cryptocurrencies' scalability and cooperative community
- Many people and companies are launching new cryptocurrencies through a mechanism known as ICO (Initial Coin Offering)

BNP PARIBAS

The bank for a changing world

## A new and still maturing technology

### Where to start ?

---

Private Markets  
Non listed  
Lack of infrastructure

AND / OR

# BNP Paribas loads first share registers on to blockchain platform

---

05 July 2017 | 18704 views | 0 

**BNP Paribas Securities Services and crowdfunding outfit SmartAngels have loaded the share registers of five of their clients onto a new platform designed to allow private companies to issue securities on the primary market and give investors access to the secondary market using blockchain technology.**

The two announced plans to develop the service last year and say they have now designed a number of critical functions that will enable private companies to manage the lifecycle of their financial securities, from issuance to the sale and purchase of securities.

## Afterall, why do we use a blockchain for this ?

---

ISSUER

INVESTOR

REGULATOR

- ▶ **Open source development** – Use of a new type of core banking system
- ▶ **A distributed architecture ease the deployment of a standard** in private markets. It will for instance allow interoperability between the crowdfunding or private investment platforms
- ▶ **Protect the investors** in a market that do not possess the safeguard of public markets
- ▶ **Facilitate tedious reconciliation processes.** As more actors join our platform we believe that the benefits of a blockchain architecture will increase.

# Listed / Public Markets progress : the Australian world

The bank for a changing world

# Challenges

---

- While the technology is very promising and initiatives are popping up everywhere, challenges will need to be overcome to deliver on these promises, such as :
  - **Technology still in infancy** (stability of protocols, scalability, reliability, interoperability, public versus private, permissioned versus permissionless, consensus, integration with legacy systems, distributed privacy, zkp...).
    - Bitcoin 7 tps / 0.10 to 2.5\$ per transaction, timing 10 minutes
    - Ethereum 20 to 30 tps / 0.2 to 5.0 \$ per transaction / 15 seconds
  - **Identity framework**
  - **Regulatory landscape & Legal implications**
  - **Intellectual Property**
  - Ability of different players and regulators to **continue to cooperate** beyond POC season

# Conclusions : A range of applications

**Technology still in infancy** (stability of protocols, scalability, reliability, interoperability, public versus private, permissioned versus permissionless, consensus, integration with legacy systems, distributed privacy, **high level frameworks required**, **regulatory landscape - sandboxes or ordonnances-**, **use case facing reality**)

# Digital dashboard for Blockchain

---

- Drive the **vision**
- **Client** experience at the center
- **Disruptive**
  - Digital is not a commodity (not done before)
  - Packages do not exist and cannot be implemented (new culture)
  - Digital world is a very dangerous and competitive place (speed)
  - Digital IT is key to implementing the business digital strategy and need to be set-up apart from standard IT (bi-modal IT)
- **Transversality** is key
- **Shorten the 6 years percolation theory** through new ways of thinking
